

Addition of a 3 Digit Number to a 3 Digit Number using Compact Columnar Addition

- Write the larger 3 digit number first and write the smaller 3 digit number directly underneath.
- Add the ones first, recording the ones below and carrying a ten underneath the line when necessary.
- Next, add the tens and record the total number of tens below.
- Add the hundreds and record the total below.

$$\begin{array}{r} 247 \\ +125 \\ \hline 372 \\ \hline 10 \end{array}$$

Important - line up your HTO columns- using squared paper helps.

Don't forget to include the tens you have made.

You can support your calculations with equipment e.g. place value counters and place value grid.
